## Anti-Phishing Takedown Service

### Telecom Fraud Is Rampant, Numerous Institutions Being Counterfeited

Thousands of institutions were spoofed by the end of December 2024, with the financial industry (banking, securities, and insurance) being the prime target.

### Impersonation Is Growing, And So Are the Risks

Phishing, scams, and impersonation attacks are evolving fast—targeting your brand, customers, and employees across websites, social media, mobile apps, and more. Regulators are demanding action. Attackers are getting faster. You need a solution that doesn't just detect these threats, but takes them down.

## One Platform. End-to-End Protection.

Providing sustained technical support to financial institutions.

Built on our battle-tested SaaS platform and threat intelligence.

We have built a repository of millions of distinct phishing website signatures.

Initial notification within 30 minutes of detection.

### Comprehensive Annual Response Plan:

- 24/7 SaaS monitoring and incident response.
- 8/5 technical support
- Guaranteed initial notification: within 30 minutes of detection.

## Digital Asset Leak Monitoring and Response

### Leakage of core product source code

The leak of proprietary source code on GitHub has caused a loss of key technical assets.

### Unauthorized storage of classified documents on cloud drives

This dangerous practice severs internal control over the files and exposes them to permission leaks or unauthorized access.

### Accidental leakage of internal files

Internal documents became publicly accessible, downloadable, and were further distributed.

### Trading of sensitive data on the dark web

Sensitive data including personal information and commercial secrets are traded by criminals on the dark web and other illegal channels.

## One Platform. End-to-End Protection.
